

Skander Bardaoui

Backend / Python Developer — APIs, Data & AI-Driven Development

skonbardaoui@gmail.com | +216 50 324 099 | Bizerte, Tunisia | linkedin.com/in/skander-bardaoui-b916091a5 | github.com/Skander-Bardaoui

PROFILE

Engineering student in Computer Science, looking for a final-year internship (PFE) to grow into a backend/full-stack software engineer. Comfortable designing APIs and data flows in Python and other backend stacks, working with relational databases (MySQL/PostgreSQL), and automating real-world data pipelines. Background in applied machine learning (classification, clustering, optimization-style problems) and full ownership of projects end-to-end, from data to interface. Works AI-driven daily — using LLM coding agents to generate code while reviewing, testing and taking full responsibility for what ships.

EXPERIENCE

- Engineer Intern — AppsFactor, Tunisia2024
- Designed and built a RESTful API (Symfony) for geographic filtering of listings, implementing geocoding, proximity scoring, pagination and radius fallback — the same kind of business logic + API design this role calls for.
 - Secured the API with key-based authentication and rate limiting; documented endpoints for downstream integration.
- End-of-Studies Intern — Hometech, DjerbaFeb – Jun 2024
- Automated ETL data pipelines processing 10,000+ records/day with an error rate below 1%, syncing real operational data between systems.
 - Delivered 3 HR modules for 200+ employees end-to-end (backend logic to interface) and helped cut post-production bugs by 30% through regular code review in a 5-developer agile team.

SELECTED PROJECTS

- SaaS Financial Platform — NestJS · PostgreSQL · React · Docker
- Built the backend of a multi-tenant financial SaaS platform end-to-end: REST API, RBAC, recurring billing logic, PDF generation and real-time notifications, consumed by a React client.
- Fraud Detection with Machine Learning — Python · Scikit-learn · XGBoost
- Built and compared classification and clustering models (XGBoost, SVM, Logistic Regression, KMeans, DBSCAN) with SMOTE for class imbalance — hands-on experience with optimization-style, decision-oriented ML problems.
- GestBank — Bank Client Management API — ASP.NET Core Web API · React · TypeScript
- Designed the backend API layer and a clean services architecture consumed by a React/TypeScript front-end.

EDUCATION

- Computer Engineering — Minor in Business Intelligence — Esprit School of Engineering (2023 – 2027, in progress — seeking final-year internship)
- Bachelor's in Business Intelligence — Institut Supérieur de Gestion de Bizerte (2021 – 2024)

SKILLS

Backend & APIs	Python, NestJS, Symfony, Laravel, Spring Boot, ASP.NET Core, REST API design, PHP, Java
Databases	MySQL, PostgreSQL, MongoDB, MS SQL Server
Data & ML	Python (Scikit-learn, Jupyter), XGBoost, SVM, KMeans, DBSCAN, ETL automation (Talend)
AI-Driven Dev	Daily use of AI coding agents (Gemini, GitHub Copilot, Claude Code) — review, test and own the output
DevOps & CI/CD	Docker, Jenkins, Kubernetes / Minikube, Git workflows, code review, Linux
Front-End	React, Angular, TypeScript, Tailwind CSS
Languages	Arabic (native) · French (fluent) · English (fluent)
